Education

Fall 2015 - Fall 2019 **B.S. Computer Science**, *University of California, Berkeley*.
Relevant Courses: Efficient Algorithms, Data Structures, Database System, Principles and Techniques of Data Science, Artificial Intelligence

Work Experience

March 2022 - Current **Software Engineer**, *Microsoft*, Mountain View, CA.

- Designed, developed, and maintained key APIs and features for a multisession experience, productivity tools (infrastructure for Microsoft AI Copilot and Teams), and a Channel Integration Framework (supporting all chat and voice capabilities).
- Delivered infrastructure improvements that increased the reliability of high-impact APIs to 99.97%.
- Collaborated with cross-functional teams on projects including session limit management and customer service workspace modernization. Led vendor teams to achieve 100% automation and unit test coverage on key codebases, significantly boosting code reliability.
- Consistently demonstrated high on-call responsiveness and efficiency by mitigating an average of 10 incidents weekly for SP500 customers across eight global regions, delivering prompt repair items and fix deployments, and providing detailed postmortems to foster cross-team knowledge sharing.

October 2020 - March 2022 **Software Engineer**, *Michaels (michaels.com)*, San Jose, CA.

- Part of company-wide initiative to completely redesign Michael's online ecommerce experience.
- Full stack engineer in charge of both designing and implementing key customer facing features in the Customer Resolution team.
- Backend: implement and authentication in customer care portal using JWT and Sprint AOP, In-App Messaging, and user registration involving login/logout, activation and passwords reset using Sprint Boots.
- Frontend: build variety of web pages such as User Search, Listing Management, Order Management, and Seller Dashboard using React, Redux, and JavaScript.

Jan 2018 - August 2019 **Software Engineer**, *Qcompass Voyage Limited (qeeq.com)*, Hong Kong, China.

- As part of this startup that provides car rental services in 160+ countries, I worked as part Full Stack Software Engineer and part Data Analyst focused primarily on pricing strategy.
- Data Analytics: designed, built, and launched data analytics used by 200+ internal customers daily from product, marketing, and finance teams using JavaScript, Highcharts JS and Power BI.
- Data Processing: optimized existing data pipelines and automated large scale data processing systems.

Projects

Fall 2020 **Custom Macros for Dynamics**.

- Developed a custom macros feature that automates repetitive tasks by enabling customers to define and execute user-defined JavaScript within Dynamics. This feature was instrumental in migrating the final batch of key customers from Unified Service Desk to a modern SaaS platform, providing an efficient and manageable way to implement and maintain customized code.

Fall 2020 **Agent Diagnostic Tool & Routing Alert**.

- Developed a suite of APIs for consumption across various internal systems to trigger the Agent Diagnostic Center session pop-up. The solution automatically executes relevant error checks for faster troubleshooting and provides actionable insights for administrators to quickly mitigate issues.

Spring 2021 **In-App messaging**.

- Designed and implemented an in-app messaging service for buyers and sellers to communicate (Sending texts and images) in online marketplace.
- Implemented APIs to store and retreive recent contacts, tagged conversations, and unread messages count.
- Developed notification system integrated with Twilio's API to improve user engagements.
- Lead implementation of new feature that adds broadcast message service support.

Fall 2020 **IAM: Identity and Access Management**.

- Designed and implemented an Identity and Access control management service with RBAC.
- Built RESTful API for users, roles, permissions, and create/delete user-to-roles and role-to-permissions mapping.
- Implemented activity log for read/write operations for important resources using Spring AOP with multithreading.
- Implemented schedule task and smtp email service for notification of change and alerts.

Skills

Programming	Java, Python, JavaScript, HTML, CSS, Typescript, C#
Software	Sprint Boot, MySQL, MongoDB, Couchbase, Kafka, Flink, Jmeter, React.js
	Redux, Docker, AOP, Redis, Cassandra
Data Science	Regression, AB Testing, Pandas, Power BI, Tableau, Google Analytics
